Ranking Recovery Plan

Traffic isliye nahi aa raha ki purani site abhi bhi zinda hai, aur nayi site kisi bhi keyword par page 1 ke aas-paas tak nahi hai. Yeh report batati hai kya toota hua hai, kyun matter karta hai, aur exact kya karna hai.

Date 25 Aug 2026 **Data** Semrush (IN database), live crawl, repo audit

Old domain webdigitaldevelopment.in

SEEDHI BAAT

Aapki purani site par bhi kabhi real traffic nahi tha. Semrush ke hisaab se .in domain kabhi bhi 5–32 keywords se zyada par rank nahi kiya, aur uske paas sirf 15 referring domains the. Toh "purani site par zyada aa raha tha" — yeh feeling sahi ho sakti hai (direct/WhatsApp/referral leads), lekin *organic search* kabhi kaam kar hi nahi raha tha.

Nayi site technically purani se kaafi behtar hai. Schema, sitemap, robots, metadata, internal linking, 27 blogs, 8 service pages — foundation solid hai. Ye rebuild waste nahi gaya.

Lekin teen cheezein rank hone se rok rahi hain: (1) purana .in site abhi bhi live hai aur khud ko canonical bata raha hai — Google ke liye do same businesses compete kar rahe hain; (2) domain authority 6 hai jabki page 1 wale competitors 33 par hain; (3) aapke saare rankings position 53–82 par atke hain — matlab page 6 se 9. Kisi ek bhi keyword par aap breakthrough ke kareeb nahi ho.

AUTHORITY SCORE	REFERRING DOMAINS	RANKING KEYWORDS
6	**131**	**22**
Page-1 competitor: 33	Competitor: 1,170	Sab position 38+

BEST POSITION	ORGANIC TRAFFIC/MO	OLD .IN SITE
38	**~19**	**LIVE**
Page 4 · zero clicks	Estimated visits	Duplicate, indexable

PART 01

Kya-kya galat hai

Priority order mein. Upar wale teen fix kiye bina neeche wale kaam ka asar aadha reh jayega.

01

CRITICAL · SAB KUCH ISI PAR ATKA HAI

Purani .in site abhi bhi poori tarah live hai

`webdigitaldevelopment.in/services`, `/about` — koi bhi URL kholo, purani PHP site ka homepage khulta hai, aur uska canonical tag `https://webdigitaldevelopment.in/` par point karta hai. Uska `sitemap.xml` bhi abhi tak live hai jisme 8 purane `.php` URLs padre hain (last modified: March 2024).

Root domain par 302 redirect laga hai — **302 temporary hota hai, 301 permanent**. 302 Google ko keh raha hai "ye badlav asthayi hai, purana URL hi index rakho". Isliye link equity transfer nahi ho rahi.

Kyun problem hai: Google ke liye ek hi business ki do websites hain, same content, same NAP, aur purani wali khud ko "asli" bata rahi hai. Dono ek doosre ko cannibalise kar rahe hain aur na aapki authority consolidate ho rahi hai, na signals.

FIX — IS HAFTE

1. Purani .in hosting ke root mein `.htaccess` daalo (neeche code) — **301**, aur path-preserving.
2. Purana `sitemap.xml` aur saara PHP content hosting se hata do.
3. Search Console mein .in property kholo → Settings → **Change of Address** → .com select karo. Ye Google ko formally migration batata hai.
4. .in property ke *Removals* tool se purane indexed URLs temporarily hide karo taaki dedupe fast ho.
5. .in domain 12+ mahine renew karte raho — redirect chalta rehna zaroori hai.

```
# webdigitaldevelopment.in ke root .htaccess mein
RewriteEngine On
RewriteCond %{HTTP_HOST} ^(www\.)?webdigitaldevelopment\.in$ [NC]
RewriteRule ^(.*)$ https://webdigitaldevelopment.com/$1 [R=301,L]
```

02

CRITICAL · SABSE BADA LONG-TERM GAP

Authority Score 6 hai — page 1 walon ka 33 hai

Aapke paas 131 referring domains hain (243 backlinks). Webclickindia jaise page-1 competitor ke paas **1,170 referring domains** aur 3 lakh+ backlinks hain. Content chahe

kitna bhi accha ho, is gap ke saath commercial Delhi keywords par page 1 nahi milega.

Kyun problem hai: "website designing company in delhi" jaise keywords par har result ek established agency hai. Backlinks hi wo cheez hain jo aapko position 73 se position 15 tak le jayegi — on-page tweaks se nahi hoga.

FIX — HAR MAHINE 8-12 NAYE REFERRING DOMAINS KA TARGET

- **Client backlinks (sabse aasan):** aapne 400+ sites deliver ki hain. Har client ke footer mein "Designed by Web Digital Development" — dofollow, brand+partial anchor mix. Ye ek hi step 50–100 domains de sakta hai.
- **Indian business directories:** JustDial, Sulekha, IndiaMART, Clutch, GoodFirms, DesignRush, Yellow Pages India, TradeIndia, Expertise. GoodFirms aur Clutch se referral leads bhi aate hain.
- **Local citations:** ek hi NAP ke saath 25–30 Delhi/NCR listings.
- **Guest posts:** Indian startup/SME blogs par 2 posts/mahina — "website cost in India", "how to pick a web agency".
- **Digital PR:** apne client case studies ko unke industry publications mein pitch karo.

03

CRITICAL · STRATEGY KI GALTI

Aap sirf sabse mushkil keywords ko target kar rahe ho

Aapke saare 22 ranking keywords position **53–82** par hain. Kuch bhi page 1 ke kareeb nahi. Homepage "web development company in delhi" (1,600/mo, KD 23) par position 73 par hai — matlab uss keyword par aapko 60+ positions chadhna hai.

Kyun problem hai: Jab AS 6 ho, KD 23+ keywords 12–18 mahine ka khel hain. Us beech kuch bhi nahi milta. Aapko pehle jeetne layak keywords chahiye — jinse traffic aaye, engagement signals bane, aur phir bade keywords pakde jayein.

FIX

Part 02 ki keyword table dekho — KD 6–13 wale 10 keywords hain jinpe abhi jeeta ja sakta hai. Pehle 90 din unhi par lagao. Homepage ko "web development company in delhi" ke liye chhodo mat, par usse expectation mat rakho.

04

HIGH · SABSE TEZ ROI

"Near me" cluster chhoot raha hai — aur wahi sabse bada traffic hai

"website designer near me" — **5,400/mo, KD 21**. "web developer near me" — **2,400/mo, KD 12**. "website development company near me" — 480/mo, KD 11. Ye milakar aapke saare Delhi keywords se zyada volume hai, aur difficulty aadhi hai.

Kyun problem hai: Ye keywords website se nahi, **Google Business Profile** se jeete jaate hain — Map Pack se. Agar aapka GBP fully optimised nahi hai (ya hai hi nahi), toh ye poora traffic pool aapke liye exist hi nahi karta. Aur yahi wo traffic hai jo sabse zyada convert karta hai, kyunki intent "abhi kisi ko hire karna hai" hota hai.

FIX — PEHLE 2 HAFTE

1. Google Business Profile claim + verify karo. Category: *Website designer* (primary), *Internet marketing service* + *Software company* (secondary).
2. NAP exactly wahi ho jo site par hai — Palam, New Delhi 110045, +91 8130270050.
3. Services section mein saari 8 services alag-alag add karo, har ek ka description.
4. 20+ real photos: office, team, delivered projects ke screenshots.
5. **Reviews:** site 130+ clients ka 4.9 claim karti hai. Un clients ko GBP par review chhodne ko bolo. Target: pehle 90 din mein 40+ Google reviews. Ye Map Pack ranking ka sabse bada factor hai.
6. Har hafte ek GBP Post — naya project, offer, blog link.
7. Site par ek `/locations/near-me` ya blog par "website developer near me" wala page (already ek blog hai — usse GBP se link karo).

05

HIGH

Delhi ki sub-localities ke liye koi page nahi

Aapke paas sirf 5 location pages hain: Delhi, Noida, Gurgaon, Faridabad, Ghaziabad. Lekin data mein sabse aasan keywords sub-locality wale hain — `website designing company in rohini` (170/mo, **KD 7**), `web designer in south delhi` (210/mo, **KD 9**), `website designing company in south delhi` (170/mo, KD 11).

Interesting baat: aapke Ghaziabad aur Faridabad pages Delhi pages se *behtar* rank kar rahe hain (position 53–57 vs 73–82). Matlab low-competition local pages aapke liye kaam karte hain — bas kaafi nahi banaye.

FIX — 8 NAYE LOCATION PAGES, HAR EK 900+ WORDS

- Rohini, South Delhi, Dwarka, Janakpuri, Pitampura, Karol Bagh, Laxmi Nagar, Uttam Nagar
- Har page unique ho — template copy-paste mat karo. Uss area ke local business types, ek local client ka case study, area-specific FAQ, aur nearby areas ke internal links.
- Existing 5 pages abhi ~650 words hain — unhe 1,200+ tak badhao: pricing table, area-specific projects, 6–8 FAQs with FAQ schema.

06

HIGH · 10 MINUTE KA KAAM

Homepage ka H1 mein ek bhi target keyword nahi

Title tag sahi hai: "Website Design Company in Delhi | Web Digital Development". Lekin H1 hai: **"Get Your Business Online in Just 3–5 Days"**. Conversion ke liye achha hai, SEO ke liye zero. Aisa hi service pages par — `/services/website-designing` ka H1 sirf "Website Designing" hai, jabki title "Website Design Services in Delhi" target karta hai.

Kyun problem hai: H1 Google ke liye page ka sabse strong on-page topic signal hai. Title aur H1 ka mismatch relevance dilute karta hai.

FIX

- Homepage H1 → *"Website Design & Development Company in Delhi"*, aur "Get Your Business Online in Just 3–5 Days" ko H2/sub-headline bana do. Conversion punch bacha rahega.
- Har service page ka H1 mein service + "in Delhi" ho: "Website Design Services in Delhi", "SEO Services in Delhi", etc.
- Har page par exactly ek H1 ho, aur H2 → H3 hierarchy skip na kare.

07

HIGH · PURA KEYWORD CLUSTER KHALI PADA HAI

Site par kahin pricing nahi hai

Service pages par koi price nahi. Lekin: `website designing company in delhi with price` — 170/mo, **KD 10**. `cheap website designing company in delhi` — 170/mo, KD 10. `affordable website development company` — 260/mo, KD 18. Aapke paas ek blog hai "website cost delhi 2026", par service pages par kuch nahi.

Kyun problem hai: Ye buying-intent keywords hain — inpe aane wala banda quote maangne wala hai. Aur ye India ke SME market mein sabse zyada search hone wale modifiers hain.

FIX

- Ek dedicated `/pricing` page: 3 packages (Starter / Business / E-commerce), har ek mein clearly kya-kya included hai, "starting from ₹X" format.
- Har service page par ek pricing block + `Offer` / `PriceSpecification` schema.
- "Website cost delhi 2026" blog ko refresh karke pricing page se link karo — dono taraf.

08

MEDIUM · LOCAL SEO KO KHARAB KARTA HAI

NAP inconsistency — site abhi bhi .in email dikha rahi hai

Live homepage par contact email `support@webdigitaldevelopment.in` hai, jabki `siteConfig` mein `support@webdigitaldevelopment.com` set hai. Matlab ye value database/CMS content se aa rahi hai, config se nahi.

Kyun problem hai: Local SEO poori tarah NAP consistency par chalta hai. Purane domain ka email har jagah pada rehna Google ko confuse karta hai ki ye business kaun sa domain

hai — aur point 01 wali duplicate problem ko aur pakka karta hai.

FIX

- Admin panel → site content mein email `support@webdigitaldevelopment.com` karo (aur .in mailbox par forwarding laga do).
- Phone format ek hi rakho har jagah: `+91 8130270050`. Abhi config mein `+91 81302 70050` hai, site par bina space ke — schema, GBP aur directories sab mein ek format use karo.
- Sab directories aur social profiles mein bhi update karo.

09

MEDIUM

Core Web Vitals verify nahi hue

Next.js 14 par bani site hai, security headers, image optimisation, font `display:swap`, static caching — sab set hai. Lekin homepage par Google Analytics + Clarity + Google Translate widget teeno load hote hain, aur homepage ~2,800 words + video/animation heavy hai. Mobile par LCP aur TBT check karna zaroori hai.

FIX

- pagespeed.web.dev par homepage, /services aur ek location page mobile mode mein chalao.
- Target: LCP < 2.5s, INP < 200ms, CLS < 0.1.
- Search Console → Core Web Vitals report weekly dekho — lab data se field data zyada matter karta hai.
- Google Translate widget agar zyada use nahi ho raha toh hata do — teen extra domains se script load karta hai.

10

YE THEEK HAI — ISKE PEECHE MAT BHAAGO

"Broken links" report jhoothi hai

Repo mein pada `external_broken_links_20260820.xlsx` 53 broken links dikhata hai. Saare `wa.me/918130270050` WhatsApp share links hain, aur sabka HTTP code **429** hai — matlab WhatsApp ne crawler ko rate-limit kiya, link toota nahi hai. Ispe time waste mat karo.

11

YE BHI THEEK HAI

Technical foundation strong hai

Sitemap 61 URLs ke saath dynamic hai aur real `lastModified` dates use karta hai. Robots.txt sahi hai aur GPTBot/PerplexityBot/ClaudeBot ko explicitly allow karta hai (AI search ke liye achha). Schema markup comprehensive hai — ProfessionalService, Article, FAQ,

Breadcrumb, Service, Review, Speakable. Metadata, canonicals, OG tags, Google verification — sab in place. 27 blogs topically relevant hain.

Yani rebuild galat nahi tha. Bas uske baad ka kaam — migration close karna, authority banana, aur jeetne layak keywords chunna — nahi hua.

PART 02

Kaunse keywords, kis order mein

Semrush India database. KD = Keyword Difficulty. AS 6 par realistically KD 20 tak hi target karo — usse upar wale phase 3 ke liye hain.

Tier 1 — abhi jeetne layak (KD ≤ 13)

KEYWORD	VOL/MO	KD	KIS PAGE PAR
responsive website design services in delhi	210	6	/services/website-designing
website designing company in rohini	170	7	**naya** /locations/rohini
web designer in south delhi	210	9	**naya** /locations/south-delhi
cheap website designing company in delhi	170	10	**naya** /pricing
website designing company in delhi with price	170	10	**naya** /pricing
website designing company in south delhi	170	11	**naya** /locations/south-delhi
website development company near me	480	11	GBP + existing blog
web developer near me	2,400	12	GBP (Map Pack)
website designing company in delhi ncr	320	13	/locations/delhi

Tier 1 ka total volume: ~4,300/mo. Yahan se 15–20% CTR bhi mile toh 600+ visits/month — abhi 19 hai.

Tier 2 — 3–6 mahine (KD 15–21)

KEYWORD	VOL/MO	KD	KIS PAGE PAR
web design new delhi	140	15	/locations/delhi
website design companies near me	720	16	GBP
website redesign delhi	140	16	**naya** /services/website-redesign
web development company in delhi ncr	720	18	/locations/delhi
website development company in delhi ncr	720	18	/services/website-development
website designing services in delhi	210	18	/services/website-designing
affordable website development company	260	18	/pricing
website designer near me	5,400	21	GBP (Map Pack)
website maker in delhi	210	21	homepage

Tier 3 (6–12 mahine, AS 15+ chahiye): "web development company in delhi" (1,600, KD 23), "top web design companies in delhi" (390, KD 24), "best website development company in delhi ncr" (720, KD 26).

PART 03

90-din ka plan

Order maayne rakhta hai. Phase 1 kiye bina Phase 2 ka asar aadha hoga.

Phase 1 — Bleeding roko WEEK 1–2

Migration properly band karo aur Google ko batao ki asli site kaun si hai. Ye sabse zaroori hafta hai.

DO FIRST	.in par 301 path-preserving redirect lagao, purana sitemap.xml aur PHP files delete karo
DO FIRST	GSC mein .in property ka **Change of Address** → .com submit karo
GSC	.com property mein sitemap submit karo, Coverage report mein check karo kitne URLs indexed hain (61 hone chahiye)
GSC	URL Inspection se homepage, /pricing, saare location pages manually index request karo
CONTENT	Site par har jagah .in email hatao → .com karo; phone format standardise karo
GBP	Google Business Profile claim + verify karo, categories aur services set karo
ON-PAGE	Homepage aur saare service pages ke H1 fix karo (keyword + Delhi)
SPEED	PageSpeed Insights baseline lo — homepage, /services, /locations/delhi

Phase 2 — Jeetne layak pages banao WEEK 3–8

Tier 1 keywords ke liye pages banao, aur GBP se local pack traffic shuru karo — yahi sabse tez leads deta hai.

PAGES	`/pricing` banao — 3 packages, transparent "starting from" prices, FAQ schema
PAGES	4 sub-locality pages: Rohini, South Delhi, Dwarka, Janakpuri — har ek 900+ unique words
PAGES	Existing 5 location pages ko 650 → 1,200+ words expand karo, pricing table + 6-8 FAQs add karo
GBP	40 Google reviews ka target — purane clients ko WhatsApp par direct review link bhejo
GBP	20+ photos upload karo, har hafte 1 GBP post
LINKS	Top 50 delivered client sites ke footer mein "Designed by" dofollow link add karwao
LINKS	JustDial, Sulekha, IndiaMART, Clutch, GoodFirms, DesignRush par listings — identical NAP
CONTENT	Naya service page: `/services/website-redesign`
ON-PAGE	Blog se service/location pages tak internal links strong karo — har blog se 2-3 relevant links

Phase 3 — Authority chadhao WEEK 9–12+

Consistent link building aur content velocity. Yahi wo phase hai jo Tier 3 keywords unlock karta hai — par ye rukna nahi chahiye.

LINKS	Har mahine 8–12 naye referring domains — guest posts, directories, client links, PR
CONTENT	Har hafte 1 blog, Tier 1/2 keywords ke around, har ek 1,500+ words with FAQ schema
CONTENT	4 sub-locality pages aur: Pitampura, Karol Bagh, Laxmi Nagar, Uttam Nagar
CONTENT	3–4 detailed case studies — client ka problem, aapka solution, measurable result. Ye E-E-A-T aur conversion dono ke liye
TRACK	Semrush Position Tracking set up karo Tier 1 + Tier 2 keywords ke liye, weekly review
GBP	Reviews ka flow chalu rakho — har delivered project ke baad review maango

PART 04

Kya track karna hai

SEO mein 4–8 hafte lagte hain asar dikhne mein. Weekly ranking check karke pareshan mat ho — monthly dekho.

METRIC	ABHI	DAY 30	DAY 90	KAHAN DEKHO
Indexed pages (.com)	?	61	75+	GSC → Pages
Indexed pages (.in)	8	0	0	GSC → .in property
Referring domains	131	170	230+	Semrush Backlinks
Authority Score	6	8	12+	Semrush
Keywords in top 20	0	3	10+	Semrush Position Tracking
Google reviews	?	20	40+	GBP
Organic clicks/mo	~19	80	350+	GSC → Performance
Map Pack impressions	0	—	growing	GBP Insights

Ek warning: Phase 1 ke baad 2–4 hafte tak rankings thodi *aur* gir sakti hain. Ye normal hai — Google purani .in URLs ko deindex kar raha hota hai aur signals consolidate ho rahe hote hain. Panic mat karna, redirect ko rollback bilkul mat karna.

Data sources: Semrush India database (organic keywords, backlink profile, keyword difficulty, SERP analysis), live crawl of webdigitaldevelopment.com and webdigitaldevelopment.in, and a code audit of the redesidn-web repository — 25 August 2026.

Competitor benchmark: webclickindia.com (page-1 for "website designing company in delhi").
